Motor-driven Chemical Metering Pumps

Series G Motor-Driven Metering Pumps

The Series G Metering Pump is designed for high output applications. The drive incorporates a variable eccentric design which ensures smooth output and reduces system shock. The mechanically actuated diaphragm reduces the possibility of hydraulic oil contamination of process liquid which makes this an ideal pump for water treatment applications. DC variable speed drives are available for external control and automation. The SD & SG metering pumps offer a high level of reliability with outstanding value for applications up to 175 psi (12 Bar).
